

AIR TERMIC

AIR TERMIC

El conducto doble Air Termic es ideal para chimeneas de calderas, fuego a tierra etc.. e instalaciones de climatización que vayan ubicadas en zonas a la intemperie aunque también se puede instalar en instalaciones ubicadas en interiores ya que evita la condensación y la pérdida del frío o calor del aire conducido.

En nuestra gama Air Termic utilizamos aislamiento de lana mineral de espesor 25mm con densidad 40 Kg/m³ y la ofrecemos en cuatro acabados diferentes:

Galva/galva (galvanizado interior y exterior).

Inox/Inox (Inoxidable interior y exterior).

Inox/Galva (inoxidable interior y galvanizado exterior).

Galva/Inox (galvanizado interior e inoxidable exterior).

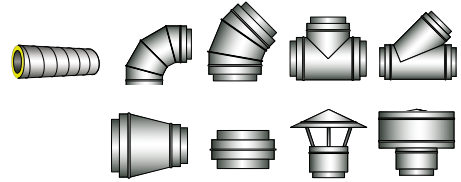

Fabricación de tramos de longitud de 3mts y gama de piezas standard, con posibilidad de fabricar además, piezas a medida para adaptarnos a las necesidades de la instalación. La unión directa entre tubos y piezas sin necesidad de accesorios adicionales ayuda en gran medida a facilitar su instalación.

Opcionalmente podemos fabricar el conducto Air Termic con brida de unión, lo cual facilita enormemente su instalación produciendo una gran reducción de costes tanto en instalaciones verticales como horizontales, en diámetros medianos y grandes.(a partir de Ø 500).
